

Rhinestone System

Complete Solution for Creating Rhinestone Heat Transfers with a GCC Cutting Plotter

The StoneCut System is specialized system for the design and production of rhinestone apparel using a GCC cutting plotter or laser engraver. The system is a complete solution that includes rhinestone design software, stock rhinestone patterns, rhinestone fonts, vector clip art and training resources.

How It Works

Vector graphics can be created in CorelDRAW or Adobe Illustrator and transferred automatically to the StoneCut™ Rhinestone Design and Production Software. Custom rhinestone patterns can be created from existing vector artwork or stock rhinestone templates and rhinestone fonts can be customized from the StoneCut™ Pattern and Font Collection. The StoneCut software will output the design to a GCC cutting plotter or laser engraver to create a pattern of circles in a specialized stencil material. The stencil is covered with rhinestones and a specialized brush is used to brush the stones into the holes. The stones will fall into the holes with the shiny side up and hot-fix adhesive side down. The stones are lifted off the stencil using transfer film creating a heat transfer that is applied using a standard heat transfer press.

Advantages of the StoneCut System

- Compatible with GCC cutting plotters and GCC LaserPro laser engravers.
- Does not require a complicated and expensive rhinestone setting machine.
- Freedom to Design text and graphics in Adobe Illustrator or CorelDRAW and transfer graphics to the StoneCut software for conversion to rhinestone patterns.
- Produce transfers without a minimum quantity and with a low production cost.
- Produce complex transfers with multiple sizes and colors.
- Compatible with rhinestones, rhinestuds, nailheads, metallic domes and other hot-fix elements.

Produce a wide variety of products

- Produce decorated apparel and gift items including T-Shirts, jackets and headwear.
- Produce multi-decoration designs that combine rhinestones with other decorating techniques including direct to garment printing, embroidery and applique.
- Produce and sell stock rhinestone heat transfers.

System Components

- StoneCut Rhinestone Design and Production Software for CorelDRAW or Adobe Illustrator, includes PDF training guide and interactive training videos.
- StoneCut Rhinestone Pattern and Font Collection, includes exclusive TrueType rhinestone fonts, rhinestone patterns and specialized vector clipart for the production of custom rhinestone patterns.
- Starter Kit with all necessary tools and supplies including stencil material, transfer film, backer boards, brushes and plastic trays.
- Rhinestone Starter Pack with over 30,000 assorted Premium quality.
